## WARNINGS AND CAUTIONS

Throughout this manual, when necessary, notes are used to identify considerations.

Definitions:

---

**WARNING:** IDENTIFIES INFORMATION ABOUT PRACTICES OR CIRCUMSTANCES THAT CAN CAUSE AN EXPLOSION IN A HAZARDOUS ENVIRONMENT, WHICH MAY LEAD TO PERSONAL INJURY OR DEATH, PROPERTY DAMAGE, OR ECONOMIC LOSS.

---

---

**CAUTION:** IDENTIFIES INFORMATION ABOUT PRACTICES OR CIRCUMSTANCES THAT CAN LEAD TO PERSONAL INJURY OR DEATH, PROPERTY DAMAGE, OR ECONOMIC LOSS. CAUTIONS HELP YOU IDENTIFY A HAZARD, AVOID A HAZARD, AND RECOGNIZE THE CONSEQUENCES.

---

---

**NOTE:** IDENTIFIES INFORMATION THAT IS CRITICAL FOR SUCCESSFUL APPLICATION AND UNDERSTANDING OF THE PRODUCT.

---

---

**AVERTISSEMENT!** RISQUE D'EXPLOSION. NE PAS BRANCHER NI DEBRANCHER SOUS TENSION.

---

## OVERVIEW

The information contained in this document is applicable to all models of the Flame Tracker Dry 325 (FTD325) listed on the title page. There are small differences between these models as shown in Table 1.

Model	Gain	Nominal Cable Length
RS-FS-9009-03	Standard	30 feet
RS-FS-9009-03-25X	Increased <sup>(*)</sup>	30 feet
RS-FS-9009-03-126	Increased <sup>(*)</sup>	3.2 meters
RS-FS-9009-03-173	Increased <sup>(*)</sup>	4.4 meters

Table 1: Sensor Differences

<sup>(\*)</sup> Gain is increased by roughly 2.5X for a given flame input signal until the output reaches between 11 and 12 mA, at which time the output is the same for all models.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	5	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## GENERAL DESCRIPTION

The Flame Tracker is an ultraviolet (UV) light sensitive detector used to measure the intensity of the flame in the combustion cans of a gas turbine. Due to the use of the silicon carbide photodiode, the Flame Tracker is very sensitive to the longer wavelength components of the UV light generated by the flame. These wavelengths penetrate the fog of fuel in the combustion can so the Flame Tracker is significantly more sensitive to the flame than previous technologies, such as Geiger Mueller tubes. Being a UV sensitive device, the Flame Tracker is not sensitive to the infrared light generated by the hot combustion can walls so only the flame's light is detected.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM

## SPECIFICATIONS

### Mechanical

Hot End Pipe Union	300 series stainless steel
Hot and Cool End Housings	300 series stainless steel
Hot End Mount	3/4" NPT female, 2-1/4" union nut
Cool End Mount	2-1/2" pipe clamp for 1-5/8" strut channel
Connector	MIL-C-38999 Series III size 15 (5 pin)
Sensor:	Silicon Carbide photodiode
Window:	Sapphire

### Operating

Sensitivity:	>5 mA @ $1 \times 10^{10}$ photons/in <sup>2</sup> /sec. @ 310 nm for RS-FS-9009-03 >6.25 mA @ $1 \times 10^{10}$ photons/in <sup>2</sup> /sec. @ 310 nm for all other models
Output:	4 - 20 mA dc, Max < 21 mA
Response time	<175 milliseconds
Power Requirements:	12 - 30 vdc @ > 100 mA  Terminals isolated from case per EN 60079-11 Section 6.3.12 (500 V <sub>r.m.s.</sub> )
Cool end temperature (ambient):	-60°F to 284°F (-51°C to 140°C) operating -60°F to 302°F (-51°C to 150°C) short duration with 150°C shutdown
Hot end temperature (ambient)	-60°F to 617°F (-51°C to 325°C) operating
Relative Humidity	100% Non-Condensing
Process Pressure	400 psig (2.8 Mpa)

Table 2: Sensor Specifications

## INTERCONNECTING CABLE

The recommended cable to attach the flame sensor to the junction box is the RS-E2-O285PXXX or 362A1053PXX. A right angle cable version is shown in Figure 1.

Dimensions shown are in inches (mm) and are reference only.

Figure 1: 4-20 mA Interconnect Cable

Connector : MIL-DTL-38999 series III, shell size 15, 5 #16 pins

Voltage (max) : 300 VRMS

Temperature (max) : 482°F (250°C)

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	8	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

The available cable part numbers are listed in Table .

Interconnecting Cable Part Number	Total Length ft [m]	Armor Length in [cm]	Connector Type
RS-E2-0285P001	60-62 [18.3-18.9]	36 [14.2]	Right Angle
RS-E2-0285P003	60-62 [18.3-18.9]	75 [190.5]	Right Angle
RS-E2-0285P004	120-123 [36.6-37.2]	36 [14.2]	Right Angle
RS-E2-0285P021	15-17 [11.9-12.50]	36 [14.2]	Right Angle
RS-E2-0285P011	60-62 [18.3-18.9]	36 [14.2]	Straight
RS-E2-0285P012	120-122 [36.6-37.2]	36 [14.2]	Straight
RS-E2-0285P013	60-62 [18.3-18.9]	96 [243.84]	Straight
RS-E2-0285P010	60-62 [18.3-18.9]	120 [304.8]	Straight

Table 3: Available 4-20 mA Cables

## MECHANICAL DIMENSIONS

Figure 2: Mechanical Dimensions

RS-FS-9009 O&M Manual	REV.:	V		

---

## SENSOR

Figure 3 shows a block diagram of the Flame Sensor. Inside the Hot End a lens focuses UV light from the combustion reaction onto a silicon carbide photodiode, which converts it into an electrical current in proportion to the intensity of the UV light. The photodiode is connected, via the sensor cable, to an amplifier in the Cool End assembly. The amplifier has a high initial gain, which automatically shifts to a lower gain in order to accommodate a wide range of input light levels without saturating. The sensor regulates the supply current in proportion to the intensity of the UV light. Both power and signal are transmitted on the same two wires on the output of the Cool End. The sensor can be powered from a DC voltage between 12 and 30 volts.

### Flame Tracker Dry 325

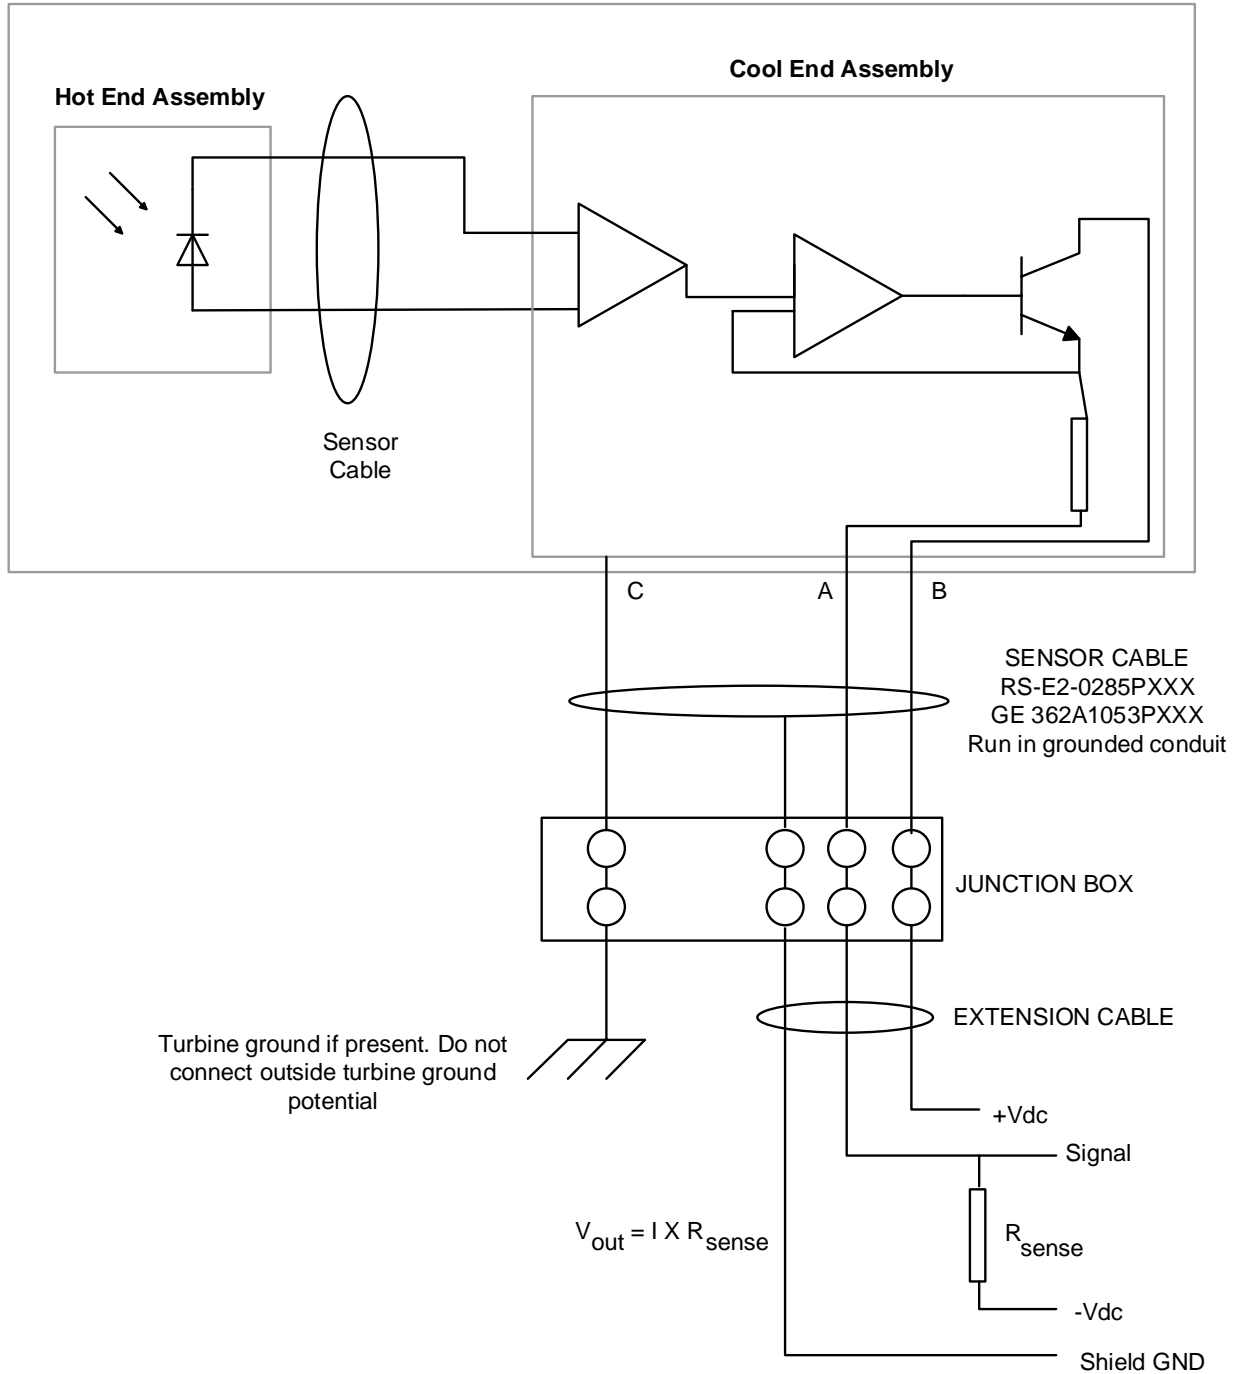

Figure 3: RS-FS-9009-03-XXX Wiring Diagram

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	13	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

## INSTALLATION

**AVERTISSEMENT!** risque d'explosion. Ne pas brancher ni debrancher sous tension.

**NOTE:** DO NOT INSTALL A FLAME SENSOR THAT HAS A CRACKED WINDOW, DAMAGED THREADS, OR ONE THAT HAS BEEN DISASSEMBLED.

**NOTE:** MAINTAIN A MINIMUM BEND RADIUS OF 6 INCHES FOR ALL BENDS OF THE MI CABLE.

**NOTE:** STORE SENSORS IN SHIPPING CONTAINER PROVIDED. KEEP IN PLASTIC BAG WITH DESICCANT, THE DUST CAP IS TO REMAIN INSTALLED ON THE COOL END CONNECTOR UNTIL TIME OF INSTALLATION.

## ROUTING THE SENSOR CABLE

The Hot End of the **Flame Tracker Dry** is mounted onto the sight tubes of the combustion cans. The *sensor cable* is mounted along the strut channel around the turbine. The Cool End is mounted in a location where ambient temperature will not exceed the value shown in the specifications above. See Figure 4 for an example installation on a Frame 7F turbine.

Figure 4: GE 7F Mounting Example

**Note:** Guide the Cool End down to the Cool End mounting location. Use care in handling the Cool End during the installation process to protect the electronics located inside the Cool End.

### Example 7EA Turbine Detector and Cable Routing

Figure 5 shows one possible installation on a 7EA turbine. Before installing the cool ends, the user must ensure that maximum ambient temperatures for the cool ends do not exceed those listed in the Specifications.

Figure 5: Sample 7EA Installation

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	16	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

Mount the *sensor cable* to the strut channel using 1/8" cushioned loop clamps. A silicone cushion is recommended for its high temperature resistance. See the images below for the recommended cable mounting.

**IMPORTANT:** *The cable must be secured at least every 3ft. The minimum bend radius of the cable is 6 inches.*

1. Place the loop clamp on the *sensor cable* and position it over the opening in the strut channel.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	17	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

2. Place the mounting nut in the strut channel and secure the installation using a bolt.

At the *Cool End*, the extra cable should be looped and mounted to a nearby strut channel using any convenient means. A secure mounting is required to prevent the *sensor cable* from rubbing due to turbine vibration. An appropriately sized pipe clamp for the size of the loops is recommended.

---

## COOL END INSTALLATION

The *Cool End* is to be mounted in a location where the ambient temperature does not exceed the maximum operating temperature listed in the Specifications section. In most cases, this is below the turbine on the pedestal or I-beam on F-Class gas turbines or under the foot grating on E-Class gas turbines. Mount the *Cool End* to the strut channel using a 2-1/2" pipe clamp.

1. Mount the *Cool End* on a 1-5/8" strut channel using 2-1/2" pipe clamp.
2. Attach the *interconnecting cable* to the large connector on the bottom of the cold end as shown above. Spin the coupling nut on the connectors until the blue line on the cable connector completely covers the red line on the housing connector. This indicate the connectors are fully engaged.
3. The *interconnecting cable* has a short, armored section after the connector. The rest of the *interconnecting cable* is not armored and must be routed through grounded conduit for protection. Ensure that only the armored cable section protrudes from the conduit. Reference *section 1.3* for armored cable specifications.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	19	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

4. The strut channel used for mounting the Cold Ends (electronics) must also be grounded.

**IMPORTANT:** *Do not use excessive torque when mating these connections as connector damage may result. The connectors should be engaged by hand without the use of tools.*

**Note:** *Do not discard the protective caps covering the connectors as they will be reinstalled to prevent damage to the connectors during maintenance outages.*

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	20	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## HOT END INSTALLATION

1. Before installing the Hot End onto the sight tube, perform a sensor functional check per the Sensor Checkout section. The flame sensor is installed to the sight tube using a pipe union. The pipe union consists of a 2-1/4" union nut, a female-end to be installed on the sight tube, and a male end that is integral to the flame sensor. To avoid damage to the sensor and the *sensor cable*, two wrenches must be used when installing the Hot End onto the sight tube. See the installation and removal steps below.
2. Apply a small amount of NEVER-SEEZ, PART NO NG-165 to the external threads of union nut and the threads of the sight tube prior to installing the Hot End of the flame sensor. Be sure the NEVER-SEEZ applied to both parts is minimal and only applied below the 2<sup>nd</sup> thread. If NEVER-SEEZ is applied to the face of the sight tube or union nut, upon heating, it can fog the window of the flame sensor and reduce output.
3. Inspect the window and clean with an isopropanol-soaked swab, if required.
4. Tighten female pipe union onto the sight tube hand tight (3-4 full turns). Tighten with a wrench approximately 2.5 additional turns.

Remove NEVER-SEEZ from faces of the sight tube and *female pipe union end*

5. Tighten the *union nut* to the *female pipe union end* by hand.

6. Use a 1-5/16" wrench to hold the *female pipe union end*. Tighten the *union nut* 120 ft.-lbs. using a 2-1/4" wrench.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	22	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

- 
7. To temporarily remove the hot end from the sight tube, reverse the instructions in step 6. The female pipe union end may be left on the sight tube. Remove the MI cable from a sufficient number of strut channel clamps and coil up the section of the hot end that is over the turbine. Tie up the coiled hot end and place to the side during outage activities.

---

**CAUTION:** THE FLAME SENSOR SEALS HIGH PRESSURES WITHIN THE TURBINE. THE UNION NUT AND FEMALE PIPE UNION END MUST BE TIGHTENED TO THE SPECIFIED TORQUE. INSUFFICIENT TORQUE COULD RESULT IN COMBUSTION GASES BEING RELEASED INTO THE TURBINE COMPARTMENT.

DO NOT WRENCH ON THE SENSOR BODY. ONLY APPLY WRENCHES TO THE HEXAGONAL FEMALE PIPE UNION END AND UNION NUT. WRENCHING ON THE SENSOR BODY MAY CAUSE HOT END DISASSEMBLY AND DAMAGE AND CAN RESULT IN THE MALFUNCTION OF THE SENSOR.

---

**NOTE:** UNION NUT SELF-ALIGNS THE FLAME SENSOR BODY TO THE SITE TUBE. THE UNION NUT MUST BE TIGHTENED TO THE SPECIFIED TORQUE. INSUFFICIENT TORQUE COULD RESULT IN POOR FLAME SENSOR SENSITIVITY.

---

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	23	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## WIRING TO THE CONTROLLER

The sensors are connected to the turbine junction box with connector cable RS-E2-0285PXXX or 362A1053PXXX. The RS-E2-0285PXXX consists of black, white and green wires twisted and shielded. All wiring must be in grounded conduit. The green wire must be connected to earth ground at the junction box. Do not connect the shields to each other or to earth ground at any location. The shields should be individually jumpered through all junction boxes and connected to the proper ground terminal at the Controller.

The cable pinout is shown in Table . Reverse polarity will not damage the sensor. Signal cable from the junction box to the Controller should be 18 gauge (1.02 mm) twisted shielded pair.

The **Flame Tracker Dry** is connected to the controller as a typical two wire current transmitter. It can be operated from any well-filtered DC supply from 12 volts to 30 volts. The nominal operating voltage is 24 VDC and the power supply should be capable of providing 100 milliamps.

The power supply must be protected to prevent the supply voltage from exceeding 30 volts in normal use and more than 42 volts under transient conditions. The maximum value for the sense resistor plus the wire resistance is dependent on the supply voltage. At 24 volts this value is 560 ohms. Resistance values for other voltages can be determined from the chart in Figure 6.

Figure 6: Maximum Resistance vs. Operating Voltage

Figure 3 shows the preferred wiring for the sensor with the  $R_{sense}$  of the controller in the return line of the sensor. This configuration can be used with controllers that have single ended inputs (one side of the input grounded) or differential inputs (neither side of the input grounded). For the interconnecting cable pinout see Table .

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	25	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## SENSOR CHECKOUT

**WARNING:** Do not disconnect while the circuit is energized (live) unless the area is known to be non-hazardous.

**CAUTION:** The operating temperature range of the Flame Sensor is -40°C to 325°C. Do not attempt to work on the Flame Sensor or the cable until they have reached to a safe handling temperature.

**AVERTISSEMENT!** risque d'explosion. ne pas brancher ni debrancher sous tension.

Disconnect the hot end from the turbine. Apply power to the sensors. Check the current values at the controller for each of the sensors. The sensors are sensitive to light, and may have some reading, depending on the ambient light level.

Test each sensor by covering the port to see the no light intensity signal, and with a flashlight to see a positive reading. With no light the reading should be 3.7 to 4.1 milliamps, while with most flashlights the reading should be above 8 milliamps. An LED flashlight may not work for this application.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	26	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

Variations in flashlight type, strength, or battery voltage may cause variation in signal output. UV inspection flashlights with a UV wavelength between 245–365 nm work best. The flashlight test is intended as a field test for general functionality only and is not a controlled or quantitative test. If a sensor is outside these rough limits, see the Troubleshooting section.

Reattach the hot end to the sight tube according to the Hot End Installation section. Make sure the sapphire window is clean; if it needs cleaning, do this according to the maintenance instructions in the Maintenance section. Check that all sensors are reading between 3.7 and 4.1 milliamps.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	27	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## CONTROLLER SETUP

The Flame Sensor provides a minimum output as listed in the Specifications section when exposed to the minimum flame intensity specified. In most turbines, the set point for flame off should be set to 6.25%, which is equal to 5 milliamps. The set point for flame on should be 10%, which equals 5.6 milliamps. If the light intensity levels are too low for these settings, there may be other problems. Refer to the Troubleshooting section.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	28	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## MAINTENANCE

**WARNING:** Do not disconnect while the circuit is energized (live) unless the area is known to be non-hazardous.

**CAUTION:** The operating temperature range of the Flame Sensor is -40°C to 325°C. Do not attempt to work on the Flame Sensor or the cable until they have reached to a safe handling temperature.

**AVERTISSEMENT!** risque d'explosion. ne pas brancher ni debrancher sous tension.

The Flame Sensor output will deteriorate as the lens becomes dirty. It is recommended, when initially installed, that the signal level be recorded during normal operation. During subsequent running, the signal level should be compared with the initial values. If a significant reduction in the signal level is noticed, then it is recommended that the lens be cleaned at the next opportunity (with the turbine shut down and cold). Clean the lens with isopropyl alcohol or other residue free solvent compatible with Sapphire. In order to reduce the risk of galling, an anti-seize compound should be applied to the mounting thread prior to reinstallation of the sensor. See the Hot End Installation section for details.

 <b>Reuter-Stokes</b> <small>a Baker Hughes business</small>	NO.:	FS-9009OM		
	PAGE:	29	OF	32
RS-FS-9009 O&M Manual	REV.:	V		

---

## TROUBLESHOOTING

**WARNING:** Do not disconnect while the circuit is energized (live) unless the area is known to be non-hazardous.

**CAUTION:** The flame sensor operates at extreme temperatures. Do not attempt to work on the flame sensor until it has reached a safe handling temperature.

**AVERTISSEMENT!** risque d'explosion. ne pas brancher ni debrancher sous tension.

Problem	Cause	Solution
No current flows	<ol style="list-style-type: none"> <li>1. Reversed polarity</li> <li>2. Open wire</li> <li>3. No 12-30V supply</li> </ol>	<ol style="list-style-type: none"> <li>1.
